

Periodic Processes

CRON – Schedule Commands (1)

❑ What we want?

- Do things at right time automatically

❑ cron daemon

- The daemon that handles periodic execution
- cron daemon reads configuration file and executes commands on time

cron(8), crontab(1), crontab(5)

CRON – Schedule Commands (2)

□ Configuration file

- So called: **crontab** (cron table)
- Location of user cron configuration file
 - Every user can have at most one crontab file and this file will be named the user's login ID
 - Edit using crontab(1) command

System	Cron Dir
FreeBSD	/var/cron/tabs
Red Hat	/var/spool/cron
Solaris	/var/spool/cron/crontabs
SunOS	/var/spool/cron/crontabs

- Location of System Cron Configuration file
 - /etc/crontab

CRON – Schedule Commands (3)

□ Configuration File Format

1. Ignored
 - Blank lines or leading spaces and tabs
2. Comments
 - pound-sign Lines whose first non-space character is a #
3. environment setting
 - name = value
 - Default environment variables
 - LOGNAME, SHELL, PATH, HOME, MAILTO

```
SHELL=/bin/sh
PATH=/etc:/bin:/sbin:/usr/bin:/usr/sbin:/usr/local/bin
```

4. cron command

Format:

minute hour day month weekday command

```
33      7      *      *      *      /usr/local/bin/rsync -al -delete /home/ backup:/raid/home/
```

CRON – Schedule Commands (4)

❑ cron command format – *minute hour day month weekday command*

Field	Description	Range
minute	Minute of the hour	0 ~ 59
hour	Hour of the day	0 ~ 23
day	Day of the month	1 ~ 31
month	Month of the year	1 ~ 12
weekday	Day of the week	0 ~ 6 (0 = Sunday)

❑ Rule Matching

- * matches everything
- Single character matches exactly
- Dash(-) matches range
- Comma(,) matches any listed value
- Slash(/) matches skips of the number's value through the range.

CRON – Schedule Commands (5)

□ crontab time format example

45 10 * * 1-5

→ AM 10:45, from Mon. to Fri.

10 * * * *

→ On 10 minutes of each hour

*/3 * * * *

→ Every three minutes **periodic**

30 15 5 * *

→ PM 3:30 of each 5-th day

e.g. $1-59/2 = 1, 3, 5, 7, 9, \dots, 59$

0 0 14 2 *

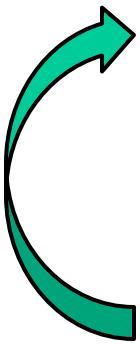

→ On the Midnight of Valentine's day

5 0-6 * * *

→ On 5 minutes, from 0 to 6 o'clock.

0,30 * 13 * 5

→ every half-hour on Fri. and every half-hour on the 13-th day

□ crontab example

20 1 * * *

find /tmp -atime +3 -exec rm -f {} ';'

55 23 * * 0-3,6

/home/chwong/cputemp-check.sh

CRON – Schedule Commands (6)

- Special strings to specify the time

string	meaning	in 5 fields format
@reboot	Run once, at startup.	N/A
@yearly	Run once a year	0 0 1 1 *
@annually	(same as @yearly)	
@monthly	Run once a month	0 0 1 * *
@weekly	Run once a week	0 0 * * 0
@daily	Run once a day	0 0 * * *
@midnight	(same as @daily)	
@hourly	Run once an hour	0 * * * *

crontab command

□ crontab(1)

% crontab -e [-u user]

- Edit the [user's] crontab using editor

% crontab -l

- List the content of the crontab

% crontab -r

- Remove the current crontab

% crontab *filename*

- Install *filename* as your crontab

crontab management

❑ To Allow or deny user from using cron daemon

- By default, all users can have their own crontab
- allow file
 - A list of users that may use crontab, any other not in the list can not use it
- deny file
 - Reverse meaning

❑ log

System	Allow or deny file	Log file
FreeBSD	/var/cron/{allow,deny}	By syslogd
Red Hat	/etc/cron.{allow,deny}	/var/log/cron
Solaris	/etc/cron.d/cron.{allow,deny}	/var/cron/log
SunOS	/var/spool/cron/cron.{allow,deny}	By syslogd

System crontab: /etc/crontab

□ System crontab

- /etc/crontab

```
SHELL=/bin/sh
PATH=/etc:/bin:/sbin:/usr/bin:/usr/sbin
HOME=/var/log
#minute hour mday month wday who command
*/5      *     *     *     *    root   /usr/libexec/atrun
*/11     *     *     *     *    operator   /usr/libexec/save-entropy
0        *     *     *     *    root   newsyslog
1        3     *     *     *    root   periodic daily
15       4     *     *     6    root   periodic weekly
30       5     1     *     *    root   periodic monthly
1,31     0-5   *     *     *    root   adjkerntz -a
```

The diagram illustrates the structure of the /etc/crontab file. It shows the fields: minute, hour, mday, month, wday, who, and command. Red ovals labeled '1' and '2' highlight specific parts of the data:

- Oval 1 (who column):** Circles the 'who' column, which lists users executing the cron jobs. Most entries have 'root' in the 'who' field, except for the second line which has 'operator'.
- Oval 2 (command column):** Circles the 'command' column, which specifies the exact command to be run by the cron job.

periodic utility (1)

□ periodic utility

- Run periodic system function under /etc/periodic

```
sabsd [/home/chwong] -chwong- ls -ld /etc/periodic/*
drwxr-xr-x 2 root wheel 1024 Sep 26 21:43 /etc/periodic/daily
drwxr-xr-x 2 root wheel 512 Sep 27 03:49 /etc/periodic/monthly
drwxr-xr-x 2 root wheel 512 Sep 27 03:49 /etc/periodic/security
drwxr-xr-x 2 root wheel 512 Sep 27 03:49 /etc/periodic/weekly
```

```
sabsd [/home/chwong] -chwong- ls /etc/periodic/daily
100.clean-disks          200.backup-passwd      405.status-ata-raid      430.status-rwho
110.clean-tmps            210.backup-aliases     406.status-gmirror       440.status-mailq
120.clean-preserve        300.calendar          407.status-graid3        450.status-security
130.clean-msgs             310.accounting        408.status-gstripe       470.status-named
140.clean-rwho             330.news              409.status-gconcat      500.queuerun
150.clean-hoststat        400.status-disks       420.status-network      999.local
```

- /etc/periodic.conf
- /etc/defaults/periodic.conf

```
nctucs [~] -wangth- ls -al /usr/local/etc/periodic/security
total 18
drwxr-xr-x 2 root wheel 4 Apr 12 2017 .
drwxr-xr-x 8 root wheel 8 Aug 20 2016 ..
-r-xr-xr-x 1 root wheel 4944 Apr 2 2017 410.pkg-audit
-r-xr-xr-x 1 root wheel 1686 Apr 2 2017 460.pkg-checksum
```

periodic utility (2)

□ periodic utility

- For custom system programs: /usr/local/etc/periodic

```
nctucs [~] -wangth- ls -l /usr/local/etc/periodic/
total 19
drwxr-xr-x  2 root  wheel   6 Apr 12  2017 daily
drwxr-xr-x  2 root  wheel   4 Aug 20  2016 hourly
drwxr-xr-x  2 root  wheel   4 Aug 20  2016 monthly
drwxr-xr-x  2 root  wheel   3 Aug 20  2016 reboot
drwxr-xr-x  2 root  wheel   4 Apr 12  2017 security
drwxr-xr-x  2 root  wheel   6 Apr 12  2017 weekly
```

```
nctucs [~] -wangth- ls -l /usr/local/etc/periodic/daily/
total 18
-r-xr-xr-x  1 root  wheel  1512 Jul 29  2016 402.zfSnap
-r-xr-xr-x  1 root  wheel  1073 Jul 29  2016 403.zfSnap_delete
-r-xr-xr-x  1 root  wheel  2746 Apr  2  2017 411.pkg-backup
-r-xr-xr-x  1 root  wheel  2506 Apr  2  2017 490.status-pkg-changes
```

periodic utility (3)

- Execution order depends on filenames
 - Use number as prefix to control the order
- All scripts under that directory will be executed
 - Unlike /etc/rc.conf
 - Even though there is no “YES” in /etc/periodic.conf
- /etc/periodic.conf

```
nctucs [~] -wangth- cat /etc/periodic.conf
daily_clean_tmps_enable="YES"                                # Delete stuff daily
daily_clean_tmps_dirs="/tmp /var/tmp"                         # Delete under here
daily_clean_tmps_days="3"                                     # If not accessed for
daily_status_zfs_enable="YES"                                 # Check ZFS
daily_status_ntpd_enable="YES"                               # Check NTP status
weekly_dehydrated_enable="YES"
...
```

- Driven by crontab(1)

at command

□ at command

- executes commands at a specified time
at [-q queue] [-f file] [-mldbv] time
or at [-q queue] [-f file] [-mldbv] -t [[CC]YY]MMDDhhmm[.SS]

□ at management

- atq: View job queue
- atrm: Remove jobs
- /var/at/at.{allow,deny}
 - By default, only root can execute “at” command

□ Driven by crontab(1)

- Invoked every 5 minutes

at(1), atrun(8)
