

FAMP

FreeBSD/Apache/MySQL/PHP

weicc

Introduction

- ❑ Web service
 - Apache
 - GWS, Nginx, IIS
- ❑ SQL service
 - MySQL, MariaDB
 - MS SQL, Oracle DB, PostgreSQL
- ❑ NoSQL service
 - MongoDB
- ❑ Web backend language
 - Go, Python, Node.js, PHP

Outline

❑ Introduction

- Apache
- MySQL
- PHP

❑ Installation and Administration

- MySQL
- Apache
- PHP

❑ Appendix

- phpMyAdmin
- lighttpd
- FastCGI

Overview

by Shmuel Csaba Otto Traian, CC BY-SA 4.0; created 2013-09-10, last updated 2014-03-28

由 Shmuel Csaba Otto Traian, 創用CC 姓名標示-相同方式分享 3.0, <https://commons.wikimedia.org/w/index.php?curid=28224098>

Apache

- ❑ Apache Software Foundation: <http://www.apache.org/>
- ❑ Apache HTTP Server Project: <http://httpd.apache.org/>
- ❑ Web httpd server that
 - HTTP/2
 - Modular design
 - Can be customized by writing modules using Apache module API
 - Freely available cross many platforms
- ❑ Two main parts
 - Core: implement basic functions and provide the interface for Apache modules
 - Modules: extend or override the function of Core
 - Example: Access control, logging, CGI, proxy, cache control, PHP...

How Apache Works – request and response

How Apache Works – Each request-response

- ❑ Apache breaks client request into several steps which are implemented as modules

Apache with mod_ssl

MySQL (1)

❑ SQL (Structured Query Language)

- The most popular computer language used to create, modify, retrieve and manipulate data from **relational database** management systems.
- Introduction to SQL: <http://www.1keydata.com/tw/sql/sql.html>

❑ A **multithreaded, multi-user, SQL** Database Management System.

❑ Owned and sponsored by a Swedish company MySQL AB, acquired by Sun Microsystems 2008.

❑ Official Site: <http://www.mysql.com>

❑ Documentation: <http://dev.mysql.com/doc>

MySQL (2)

❑ Features:

- Writing in C/C++, tested by many compilers, **portable to many platforms**.
 - AIX, FreeBSD, HP-UX, Linux, Mac OS, Solaris, Windows, ...etc.
- Providing APIs for C/C++, Java, Perl, PHP, Python, Ruby, Tcl, ...etc.
- **Multi-threaded** kernel, supporting systems with multiple CPUs.
- Optimized algorithm for **SQL** Query.
- Multi-Language (coding) Supports.
- Lots of connecting method: TCP/IP, ODBC, JDBC, Unix domain socket.
- **Free Software** (GNU General Public License version 2)
- Popular for web applications

PHP

❑ PHP: Hypertext Preprocessor

- A widely-used Open Source general-purpose scripting language.
- Originally designed to create dynamic web pages, PHP's principal focus is server-side scripting.
- PHP scripts can be embedded into HTML.
- The LAMP architecture has become popular in the Web industry as a way of deploying inexpensive, reliable, scalable, secure web applications.

❑ Official Site: <http://php.net/>

Installation and Administration

MySQL

Apache

PHP

phpMyAdmin

Installing MySQL (1)

□ Steps

- `# cd /usr/ports/databases/mysql57-server/`
- `# make OPTIONS install clean`

You may use the following build options:

<code>WITH_CHARSET=charset</code>	Define the primary built-in charset (latin1).
<code>WITH_XCHARSET=list</code>	Define other built-in charsets (may be 'all').
<code>WITH_COLLATION=collate</code>	Define default collation (latin1_swedish_ci).
<code>WITH_OPENSSL=yes</code>	Enable secure connections (define WITHOUT_YASSL for backward compatibility).
<code>WITH_LINUXTHREADS=yes</code>	Use the linuxthreads pthread library.
<code>WITH_PROC_SCOPE_PTH=yes</code>	Use process scope threads (try it if you use libpthread).
<code>WITH_FAST_MUTEXES=yes</code>	Replace mutexes with spinlocks.
<code>BUILD_OPTIMIZED=yes</code>	Enable compiler optimizations (use it if you need speed).
<code>BUILD_STATIC=yes</code>	Build a static version of mysqld. (use it if you need even more speed).
<code>WITH_NDB=yes</code>	Enable support for NDB Cluster.

Installing MySQL (2)

❑ OPTIONS:

- WITH_CHARSET=utf8
- WITH_XCHARSET=ascii, big5, ... (all)

❑ Installed...

====> SECURITY REPORT:

This port has installed the following files which may act as **network servers** and may therefore pose a **remote security risk** to the system.
/usr/local/libexec/mysqld

This port has installed the following **startup scripts** which may cause these network services to be started at boot time.
/usr/local/etc/rc.d/mysql-server

Installing MySQL (3)

❑ Startup script...

```
#  
# Add the following line to /etc/rc.conf to enable mysql:  
# mysql_enable (bool): Set to "NO" by default.  
# Set it to "YES" to enable MySQL.  
# mysql_limits (bool): Set to "NO" by default.  
# Set it to yes to run `limits -e -U mysql`  
# just before mysql starts.  
# mysql_dbdir (str): Default to "/var/db/mysql"  
# Base database directory.  
# mysql_args (str): Custom additional arguments to be passed  
# to mysqld_safe (default empty).  
#
```

Administrrating MySQL (1)

❑ Configuration file

- Copy config file
 - `# cd /usr/local/share/mysql`
 - `# cp my-huge.cnf /usr/local/etc/my.cnf`
- Edit `/usr/local/etc/my.cnf`

❑ Start mysql daemon

- Using startup script
 - `# /usr/local/etc/rc.d/mysql-server start`

Administrating MySQL (2)

❑ Test

- % `mysql -u root -p`
 - The initial password for root is empty

```
nasa [/usr/local/etc] -randy- mysql -u root -p
Enter password:
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 1
Server version: 5.1.41-log FreeBSD port: mysql-server-5.1.41

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

mysql> show databases;
+-----+
| Database |
+-----+
| information_schema |
| mysql      |
| test      |
+-----+
3 rows in set (0.06 sec)
```

Administrrating MySQL (3)

❑ Securing initial accounts

- Two initial accounts
 - root
 - anonymous

```
mysql> SELECT Host, User From mysql.user;
```

Host	User
127.0.0.1	root
nasa.cs.nctu.edu.tw	root
nasa.cs.nctu.edu.tw	root
localhost	root
localhost	root

```
mysql> UPDATE mysql.user SET Password = PASSWORD('test123') WHERE User = 'root';
Query OK, 3 rows affected (0.08 sec)
Rows matched: 3  Changed: 3  Warnings: 0
```

```
mysql> FLUSH PRIVILEGES;                # Reload the grant tables
Query OK, 0 rows affected (0.00 sec)
```

```
mysql> SET PASSWORD FOR 'root'@'localhost' = PASSWORD('ttt123');
Query OK, 0 rows affected (0.02 sec)
```

Installing Apache (1)

❑ Steps

- `# cd /usr/ports/www/apache24/`
- `# make install clean`

❑ Options

- A lot of options for modules
- `WITH_SSL` (default)
- `WITH_MPM=worker`
- `WITH_THREADS=yes`
- `WITH_SUEXEC=yes`

Installing Apache (2)

❑ Installed...

To run apache www server from startup, add `apache22_enable="YES"` in your `/etc/rc.conf`. Extra options can be found in startup script.

Your `hostname` must be resolvable using at least 1 mechanism in `/etc/nsswitch` typically DNS or `/etc/hosts` or apache might have issues starting depending on the modules you are using.

==> SECURITY REPORT:

This port has installed the following binaries which execute with

increased privileges.

`/usr/local/sbin/suexec`

❑ Startup script

- `/usr/local/etc/rc.d/apache24`
- `apache24_http_accept_enable`

Apache configuration – Configuration files

❑ Location

- The default location of apache (in ports) is /usr/local/etc/apache24
- Major configuration file: httpd.conf
 - Other configuration files could be included. (setting in httpd.conf)
 - extra/httpd-*.conf, Includes/*.conf

❑ Two types

- Global settings
 - Server configurations
 - Options of modules
- Directory Configuration
 - Local setting for certain directory

Apache configuration – Global Settings (httpd.conf)

❑ Server configuration

- Listen 80
- ServerAdmin liuyh@cs.nctu.edu.tw
- ServerName nasa.cs.nctu.edu.tw
- DocumentRoot "/home/wwwadm/data"
 - Remember create DocumentRoot directory if you modify it

❑ Options of modules

❑ Include supplemental configuration files

- Include etc/apache22/extra/httpd-*.conf
- Include etc/apache22/Includes/*.conf

Apache configuration – Directory Configuration (1)

□ Configuration parameters

- Options
 - All
 - ExecCGI
 - FollowSymLinks
 - Indexs
 - MultiViews
 - SymLinksIfOwnerMatch
- <http://httpd.apache.org/docs/2.4/mod/core.html#options>

```
<Directory "/home/wwwadm/data">  
    Options Indexes FollowSymLinks MultiViews  
    AllowOverride None  
    Order allow,deny  
    Allow from all  
</Directory>
```

Apache configuration – Directory Configuration (2)

❑ Configuration parameters

- AllowOverride
 - All (Read .htaccess)
 - None (ignoring .htaccess)
- Order
 - Solve collision of deny and allow rules
- Deny/Allow
 - IP/DN (control access to this directory)

```
<Directory "/home/wwwadm/data">  
    Options Indexes FollowSymLinks MultiViews  
    AllowOverride None  
    Order allow,deny  
    Allow from all  
</Directory>
```

Apache configuration – Options of Modules

❑ dir_module

```
<IfModule dir_module>  
    DirectoryIndex index.html  
</IfModule>
```

❑ alias_module (http://httpd.apache.org/docs/2.2/mod/mod_alias.html)

```
<IfModule alias_module>  
    Redirect /foo http://www.example.com/bar  
    Alias /webpath /full/filesystem/path  
    ScriptAlias /cgi-bin/ "/usr/local/www/apache22/cgi-bin/"  
</IfModule>
```

❑ mime_module

```
DefaultType text/plain  
<IfModule mime_module>  
    TypesConfig etc/apache22/mime.types  
    AddType application/x-compress .Z  
    AddHandler cgi-script .cgi  
</IfModule>
```

Supplemental configuration – httpd-mpm.conf (Multi-Processing Module)

❑ Server-pool management (MPM specific)

- Include etc/apache22/extra/httpd-mpm.conf

❑ WITH_MPM

- prefork: non-threaded, pre-forking
- worker: hybrid multi-process multi-threaded

```
<IfModule mpm_worker_module>  
  StartServers      2  
  MaxClients       150  
  MinSpareThreads   25  
  MaxSpareThreads   75  
  ThreadsPerChild   25  
  MaxRequestsPerChild 0  
</IfModule>
```

Supplemental configuration – httpd-userdir.conf

❑ User home directories

- Include etc/apache22/extra/httpd-userdir.conf

```
UserDir public_html
UserDir disabled root toor daemon operator bin tty kmem games news man
sshd bind proxy _pflogd _dhcp uucp pop www nobody mailnull smmsp

<Directory "/home/*/public_html">
    AllowOverride FileInfo AuthConfig Limit Indexes
    Options MultiViews Indexes SymLinksIfOwnerMatch IncludesNoExec
    <Limit GET POST OPTIONS>
        Order allow,deny
        Allow from all
    </Limit>
    <LimitExcept GET POST OPTIONS>
        Order deny,allow
        Deny from all
    </LimitExcept>
</Directory>
```

- Methods: <http://www.w3.org/Protocols/rfc2616/rfc2616-sec9.html>

Supplemental configuration – httpd-vhosts.conf

❑ Virtual hosts

- Include
etc/apache24/extra/httpd-vhosts.conf
- Name-based
 - NameVirtualHost
 - <VirtualHost>
- IP-based
 - <VirtualHost>
- ServerName
- DocumentRoot
- Ref: <http://httpd.apache.org/docs/2.2/vhosts/>

```
Listen 80
Listen 8080

NameVirtualHost 172.20.30.40:80
NameVirtualHost 172.20.30.40:8080
<VirtualHost 172.20.30.40:80>
    ServerName www.example.com
    DocumentRoot /www/domain-80
</VirtualHost>
<VirtualHost 172.20.30.40:8080>
    ServerName www.example.com
    DocumentRoot /www/domain-8080
</VirtualHost>
<VirtualHost 172.20.30.40:80>
    ServerName www.example.org
    DocumentRoot /www/otherdomain-80
</VirtualHost>
<VirtualHost 172.20.30.40:8080>
    ServerName www.example.org
    DocumentRoot /www/otherdomain-8080
</VirtualHost>
```

Supplemental configuration – More...

- ☐ Multi-language error messages
 - `httpd-multilang-errordoc.conf`
- ☐ Fancy directory listings
 - `httpd-autoindex.conf`
- ☐ Language settings
 - `httpd-languages.conf`
- ☐ Real-time info on requests and configuration
 - `httpd-info.conf`
- ☐ Local access to the Apache HTTP Server Manual
 - `httpd-manual.conf`
- ☐ Various default settings
 - `httpd-default.conf`

Other configuration for Apache – log

- ❑ Rotate your log using newsyslog
- ❑ In httpd config
 - ErrorLog "/var/log/httpd-error.log"
 - TransferLog "/var/log/httpd-access.log"

```
/var/log/httpd-access.log 640 5 * @T00 z /var/run/httpd.pid  
/var/log/httpd-error.log 640 5 * @T00 z /var/run/httpd.pid
```

- ❑ In startup script
 - _pidprefix="/var/run/httpd"
 - pidfile="\$ {_pidprefix}.pid"

.htaccess (1)

❑ .htaccess

- Allow admin or users to control access to certain directory

❑ Usage

- Modify httpd.conf
- Create .htaccess file
- Generate password database
- Test

.htaccess (2)

❑ Example

- Modify httpd.conf
- Create .htaccess file
- Generate password file

```
<Directory "/home/wwwadm/data/test1">  
    Options None  
    AllowOverride All  
    Order allow,deny  
    Allow from all  
</Directory>
```

```
$ cat .htaccess  
AuthName "SA-test1"  
AuthType "Basic"  
AuthUserFile "/home/wwwadm/data/test1/.htpasswd"  
Require valid-user  
Options Indexes
```

```
$ htpasswd -c ../.htpasswd SA-user1  
New password:  
Re-type new password:  
Adding password for user SA-user1
```

.htaccess (3)

❑ You can use these tools to generate .htaccess

- <http://www.linuxkungfu.org/tools/htaccesser/index.php>
- <http://www.htaccesseditor.com/>

Installing PHP (1)

□ Steps

- `# cd /usr/ports/lang/php5`
- `# make config`
 - Remember to choose Apache module
- `# make install clean` (in 2009 SA course)

```
# make install clean
==>  php5-5.2.11_1 has known vulnerabilities:
=>  php -- multiple vulnerabilities.
    Reference: <http://portaudit.FreeBSD.org/39a25a63-eb5c-11de-b650-00215c6a37bb.html>
=>  Please update your ports tree and try again.
*** Error code 1

Stop in /usr/ports/lang/php5.
*** Error code 1

Stop in /usr/ports/lang/php5.
```

- <http://www.freshports.org/lang/php5>

Installing PHP (2)

❑ Installed...

Make sure index.php is part of your DirectoryIndex.

You should add the following to your Apache configuration file:

```
AddType application/x-httpd-php .php
AddType application/x-httpd-php-source .phps
```

- For use of Apache, you should restart apache to load php5_module

❑ Install php5-extensions

- # cd /usr/ports/lang/php5-extensions
- # make install clean
 - Choose what you need
 - Remember to choose mysql module
- Or installing from /usr/ports/*/php5-*
 - databases/php5-mysql

Installing PHP7 (1)

□ Steps

- `# pkg install php71 php71-mysqli mod_php71 \`
`php71-mbstring php71-gd php71-json php71-mcrypt \`
`php71-zlib php71-curl`
- `# vim /usr/local/etc/apache24/Includes/php.conf`

```
<IfModule dir_module>
  DirectoryIndex index.php index.html
  <FilesMatch "\.php$">
    SetHandler application/x-httpd-php
  </FilesMatch>
  <FilesMatch "\.phps$">
    SetHandler application/x-httpd-php-source
  </FilesMatch>
</IfModule>
```

Test PHP5 in apache

❑ Edit httpd.conf

- % mkdir -p /home/wwwadm/data
- % cd /usr/local/etc/apache24/
- Edit httpd.conf

```
<IfModule mime_module>
...
AddType application/x-httpd-php .php .phtml .php5
AddType application/x-httpd-php-source .phps
...
</IfModule>
```

```
<IfModule dir_module>
    DirectoryIndex index.php index.html
</IfModule>
```

Test PHP7 in apache (2)

❑ Start apache

- `/usr/local/etc/rc.d/apache24 start`
- `service apache24 restart`

❑ Test PHP

- `# vim /usr/local/www/apache24/data/index.php`

```
<?
    phpinfo();
?>
```

phpinfo()

PHP Version 7.1.10

System	FreeBSD tbsdweicc 11.1-RELEASE FreeBSD 11.1-RELEASE #0 r321309: Fri Jul 21 02:08:28 UTC 2017 root@releng2.nyi.freebsd.org:/usr/obj/usr/src/sys/GENERIC amd64

Architecture

cluster

Load balance

❑ Nginx proxy

```
upstream backend {  
    server 172.16.1.1:3000;  
    server 172.16.1.2:3000;  
}  
server {  
    listen 80;  
    server_name www.example.com;  
    location / {  
        proxy_pass http://backend;  
    }  
}
```

MySQL cluster

Up to 150 users

One machine running the application server.

- Web server
- database server
- local storage

Authentication via an existing LDAP or Active Directory server.

150 to 1,000 users

High availability level

Every component is fully redundant and can fail without service interruption.

Backups without service interruption

5,000 to >100,000 users

4 to 20 application/Web servers.

A cluster of two or more database servers

- behind a load balancer to send all writes to the master and reads to the slaves.

Storage is an NFS server, or an object store that is S3 compatible.

Appendix

phpMyAdmin

lighttpd

FastCGI

phpMyAdmin

- ❑ phpMyAdmin can manage a whole MySQL server as well as a single database over the World Wide Web.
- ❑ Official Site: <http://www.phpmyadmin.net/>
- ❑ Documentation: <http://www.phpmyadmin.net/documentation/>
- ❑ Features
 - Browser-based, Supporting PHP5.3+, MySQL 5.0+, Open Source
- ❑ There are four authentication modes offered:
 - http
 - cookie
 - signon
 - config (the less secure one, not recommended).

Installing phpMyAdmin (1)

❑ databases/phpmyadmin

- # make install clean

❑ Installed...

```
phpMyAdmin-4.7.4 has been installed into:  
/usr/local/www/phpMyAdmin
```

Please edit `config.inc.php` to suit your needs.

To make phpMyAdmin available through your web site, I suggest that you add something like the following to `httpd.conf`:

```
Alias /phpmyadmin/ "/usr/local/www/phpMyAdmin/"
```

```
<Directory "/usr/local/www/phpMyAdmin/">
```

```
Options none
```

```
AllowOverride Limit
```

```
Order Deny,Allow
```

```
Deny from all
```

```
Allow from 127.0.0.1 .example.com
```

```
</Directory>
```

Installing phpMyAdmin (2)

☐ config.inc.php

- Override libraries/config.default.php

☐ config.sample.inc.php

- \$cfg['blowfish_secret']

Adminstrating MySQL – Using phpMyAdmin (3)

The screenshot displays the phpMyAdmin interface for a MySQL server on localhost. The left sidebar shows a list of databases, including 'mysql'. The main content area is divided into two sections: '一般設定' (General) and '外觀設定' (Appearance). The '一般設定' section includes a '修改密碼' (Change Password) link and a dropdown menu for '伺服器連線編碼與排序' (Server connection encoding and collation) set to 'utf8mb4_unicode_ci'. The '外觀設定' section includes a '語系 - Language' dropdown set to '中文 - Chinese traditional', a '主題' (Theme) dropdown set to 'pmahomme', and a '字體大小' (Font size) dropdown set to '82%'. The right sidebar contains three panels: '資料庫伺服器' (Database server), '網頁伺服器' (Web server), and 'phpMyAdmin'. The '資料庫伺服器' panel lists details about the MySQL server, including the host, type, version, and user. The '網頁伺服器' panel lists details about the web server, including the version and PHP version. The 'phpMyAdmin' panel lists details about the phpMyAdmin version and provides links to documentation and support.

Installing lighttpd

❑ www/lighttpd

- Official: <http://www.lighttpd.net/>

❑ Configuration files

- /usr/local/etc/lighttpd/{lighttpd,modules}.conf
- /usr/local/etc/lighttpd/{vhosts,conf}.d/

❑ Startup script

- /usr/local/etc/rc.d/lighttpd

❑ Documentation:

- /usr/ports/www/lighttpd/work/lighttpd-1.4.28/doc/*.txt
- alias, cgi, dirlisting, fastcgi, ssl, userdir
- Virtual hosts: evhost, mysqlvhost, simple-vhost

FastCGI

- ❑ FastCGI is actually CGI with only a few extensions.
 - FastCGI is language-independent.
 - FastCGI run applications in processes isolated from the core Web server, which provides greater security than APIs.
 - FastCGI developers are committed to propagating FastCGI as an open standard. (C/C++, Java, Perl, Tcl)
 - FastCGI is not tied to the internal architecture of any Web server and is therefore stable even when server technology changes.
- ❑ Benefits:
 - Distributed computing
 - Multiple and extensible roles
- ❑ Official site: <http://www.fastcgi.com/drupal/>
